

Hello!

My name is Mike Swisher. I am a Developer and IT professional in Aurora, CO.

Here's a link to some of my stuff: <https://portfolio.swishersolutions.com>

I have many years of experience creating software systems and developing complex web sites. I'm looking to focus my efforts and skills full-time on a worthy cause, and I think **your** cause might fit the bill!

Here are some highlights of what I have to offer:

Web Development: I am very familiar with website development and maintenance. Client side, I know jQuery, React, Angular and Vue. On the back-end, I know PHP, Python and ASP. For data storage, mySql/MariaDB is my go-to, but I can work with any DBMS. I have created many Content Management Systems for many different industries. Really... I can make a website do just about anything you can envision.

Mobile App Development: Using React Native, I have created several Mobile Apps on both Android and Apple platforms. I can create a fully-functional Mobile App, and I am comfortable with the Google and Apple requirements to getting an app in the respective stores.

User Support: I tailor user interactions such that they understand what they need to know, and I bend over backwards to support them. I also have a good sense of humor... one client likes to introduce me as a "nerd with personality"... I always have to correct her... it's "geek", not "nerd". (lame joke, I know...) But mostly, I'm good at solving their problems.

Network Administration: I am comfortable in a Linux/LAMP environment or a Windows environment. I'm not a Dev Ops guy per se, but I have significant Dev Ops chops.

Training: I am a talented trainer. I can train a single individual, or a hundred. One-on-one or to an audience, I am a persuasive and engaging presenter of knowledge.

Business Awareness: I proactively seek knowledge and expertise in the real-world business model. I ask a lot of questions. I seek to build that big picture understanding of the business, as well as particular specifics. I use this knowledge to focus my contributions as efficiently and profitably as I can.

Adaptability: I am both a leader and a team player. One of my greatest strengths is that I quickly learn new systems, techniques, approaches, etc. I am also quite flexible, and I can handle changes as they come.

Sample Code: My GitHub account: <https://github.com/swishdaddy>

My salary range is \$70,000 - \$110,000. I am seeking a Remote position.

Please feel free to give me a call anytime, and thank you for your consideration.

Experience

2003 to Present

Owner/Operator of Swisher Solutions, Aurora CO

Swisher Solutions has provided a myriad of IT support for many clients, including Mobile App Development, Custom Software Development, Website Development, Content Management Systems, Network Installation, Configuration and Administration, and User Support.

2015 to 2018

Web Developer/Project Manager

Created and programmed a multi-faceted Marketing, Wholesale and Testing Data Management solution for the legal Cannabis industry.

- Online Wholesale Management and Inventory Control
- Order Management
- Lab Information Management System (LIMS) for Nordic Analytical Labs
- Cross-platform authentication using tokens

2014 to 2015

Web Developer/Project Manager at CannaSys, Inc.

CannaSys was a technology solutions provider for the legal Cannabis industry, providing technical support and custom software to clients.

- Created CannaLIMS, a cannabis-specific Lab Information Management System. Currently used in one lab, processing ~500 samples per month.
- Created a Wordpress child theme to allow online purchasing of Gift Cards, communicating with the parent system's API.
- Created a non-obtrusive Javascript/HTML/CSS widget to allow clients to embed registration and daily deals into their website.
- Created CannaShout, an online Press Release management and submission tool.

June 2010 - January 2011

Support Analyst BP Oil Spill Response, Louisiana

- Responsible for providing Support and Training for the Trimble Nomad (running Windows Mobile 6) and ArcGIS Mobile to over 500 Field Users collecting data regarding the Oil Spill.

2000 - January 2003

IT Manager, CompassHoldings, Inc. Centennial, CO

- Fulfilled roles including Network Administrator, Support Analyst, Hardware Engineer, and all other IT related requirements.
- Provided Support and Training for the all software in use, including Windows, Outlook, GoldMine, Quoterworks, and other CMS software, and supported integrated communications.
- Created Custom Applications, including Rental, Inventory and Warranty Tracking.
- Served as Webmaster.
